SUMMARY

Backend developer with two years building REST and GraphQL APIs in Java and C# for a Mexican bank, after four years inside the same institution — moving from IT support into development. I work on corporate client onboarding (KYC), modernizing legacy services, and the CI/CD pipelines that ship them to on-premise and AWS environments.

EXPERIENCE

- Banco BASE — Grupo Financiero Base**

Monterrey, Mexico · Jun 2022 – Present

Backend Developer Jr.

Oct 2024 – Present

 - Built REST and GraphQL APIs in Java and Spring for the bank's corporate client onboarding (KYC) flow, where legal teams verify shareholders, legal representatives, articles of incorporation and company bylaws before a business is accepted as a client.
 - Integrated a third-party AI service that extracts metadata from corporate legal documents, replacing manual data entry in the legal review process.
 - Migrated the service architecture from SOAP to REST and GraphQL, covering client lookup and product management services across several of the bank's platforms.
 - Owned CI/CD end to end with Jenkins and Nexus, deploying to on-premise environments. Now work with the DevSecOps team on Bitbucket Pipelines and AWS ECR, shipping containerized services to Kubernetes (EKS).
- Help Desk Analyst**

Nov 2022 – Oct 2024

 - Diagnosed and resolved incidents for end users, on site and remotely; handled ticket triage, follow-up and escalation. Promoted into the backend development team.
- Help Desk Intern**

Jun 2022 – Nov 2022

 - First-line technical support, on site and remotely, and initial ticket handling.

Earlier: Accounting assistant at a family accounting firm (2017 – 2022) — invoice and receipt records in CONTPAQ, monthly tax filings (DIOT).

PROJECTS

- Reactive Products API**

github.com/jesus-adrian-ad/crud-spring-webflux

Non-blocking CRUD API built with Spring WebFlux and Project Reactor, with a custom HTTP request interceptor.

Java · Spring WebFlux · Project Reactor

TECHNICAL SKILLS

Building services	Java · Spring · Spring WebFlux · C# · .NET Framework · REST · GraphQL · SOAP · gRPC · Microservices
Data	SQL Server · PostgreSQL · Redis · Liquibase
Shipping & infra	Docker · Kubernetes · AWS (ECR, EKS) · Jenkins · Bitbucket Pipelines · Nexus · Git
AI	Third-party AI service integration · Devin · Claude (AI-assisted development)

EDUCATION & LANGUAGES

Systems Engineering and Management	Languages
Ingeniero Administrador de Sistemas	Spanish — Native
Universidad Autónoma de Nuevo León (UANL)	English — B2 (professional working proficiency)
Program completed — official degree in progress
